Why this package fits

This is the best starting point if you want an integrated HD system with assisted flight modes and fewer setup decisions. The Avata 2 package gets you flying quickly while leaving a path to Manual mode with the optional FPV Remote Controller 3.

Choose another path if your main goal is a repairable traditional FPV system with an independent radio ecosystem.

Budget:	Midrange complete-system cost
Environment:	Indoors and outside with careful location choice
Video:	DJI HD digital
Experience:	Completely new to beginner

Package-level safety note

Follow DJI activation, firmware, charging and safety instructions. Conventional full Manual mode requires the optional DJI FPV Remote Controller 3 and appropriate training.

Complete system purchase checklist

This is one coordinated system, not a collection of unrelated recommendations. Start with the Core System items, then add the required supporting and safety equipment before flying. Optional upgrades can wait.

Core System: Buy These First

1. Complete system: DJI Avata 2 Fly More Combo

Exact variant: Three-battery version with DJI Goggles 3 and RC Motion 3

The matched aircraft, controller and goggles used for this path.

Compatibility: The exact bundle must be the new DJI Avata 2 Fly More Combo, manufacturer part CP.FP.00000151.02, with DJI Goggles 3, RC Motion 3, three Intelligent Flight Batteries, the two-way charging hub, spare propellers, sling bag and required accessories. Do not substitute the single-battery version, a Goggles N3 package, a renewed unit or a used unit. The Amazon offer may be used only after confirming the exact seller, fulfillment, new condition and three-battery contents. DJI's U.S. documentation states that Avata 2 is equipped with a Remote ID system meeting 14 CFR Part 89. Require current firmware and confirm that the Remote ID preflight self-test reports normal before applicable U.S. operation. At approximately 377 grams, normal U.S. outdoor operation still requires FAA registration and compliance with applicable airspace and operating rules.

Included with this package: DJI Avata 2, DJI Goggles 3, DJI RC Motion 3, Three Avata 2 Intelligent Flight Batteries, DJI Avata 2 two-way charging hub, Two pairs of genuine DJI Avata 2 propellers, DJI Avata 2 sling bag, Required cables, tools and accessories included by DJI.

Required Before You Fly

2. Charging power supply: Anker 715 Charger (Nano II 65W)

Exact variant: Model A2663, 65W USB-C PD wall charger

Supplies the charger with the required input power.

Compatibility: DJI recommends a 65W USB-PD power source for the Avata 2 charging system. The Fly More Combo supplies a compatible USB-C cable but does not include the wall charger. Use the DJI-supplied cable with this power supply.

Optional Upgrades: These Can Wait

3. Manual controller: DJI FPV Remote Controller 3

Exact variant: Conventional stick controller for Avata 2 Manual mode

Adds conventional stick control for Manual mode.

Compatibility: This controller is required for progression to conventional full Manual-mode stick control. It is not required to fly using the RC Motion 3 included with the combo. The controller contains its own rechargeable battery.

4. Storage: Kingston Canvas Go! Plus 128GB microSDXC

Exact variant: SDCG3/128GB, quantity 2

Provides recording storage for the selected video system.

Compatibility: DJI lists the exact Kingston Canvas Go! Plus 128GB card for Avata 2 and Goggles 3. Quantity two permits separate recording in the aircraft and goggles. Format each card in the device where it will be used. The Avata 2 has internal storage, so microSD cards are recommended rather than required to fly.

Final compatibility check before ordering

- Bundle must explicitly include Avata 2, Goggles 3, RC Motion 3, three aircraft batteries, charging hub, and required accessories.
- Manual-mode guidance must distinguish RC Motion 3 from DJI FPV Remote Controller 3.
- Confirm current DJI firmware and supported microSD card compatibility before launch.

After everything arrives

1. Activate and update the DJI ecosystem before the first flight.
2. Start in the assisted modes and learn return-to-home, battery warnings, and emergency controls.
3. Add the FPV Remote Controller 3 only when you are ready to practice manual mode responsibly.

Operating note

This checklist is educational and package-specific. Follow manufacturer instructions, current FAA requirements, local rules, battery safety practices and site conditions before flight.
